

NEW RESEARCH PARTICIPATION OPPORTUNITY! ENROLLING NOW THROUGH 2028

Project CAPE-abilities

Communication And Play Early
abilities in Down Syndrome

The DD Lab at CSU has a new research study that focuses on how young children with Down syndrome play and communicate!

Play and communication are important for a child's development. This study will show how these skills grow in children with Down syndrome and how they connect to other health conditions and autism.

We are excited to learn more about your child's CAPE-abilities!
